Industrial Pharmacy Residency Program

Terms of Reference and Application Form for the Term 2018-2019

ADMINISTERED BY

LESLIE DAN FACULTY OF PHARMACY
University of Toronto

With participating companies (Updated Sept 25, 2017):

Allergan Inc.
- Specialty in Market Access

Amgen Canada
- Specialty in Medical Information, Medical Communication/Education and Value, Access and Policy (VA&P)

Apotex Inc.*
- Specialty in Medical Affairs and Pharmacokinetics

Astellas Pharma Canada Inc.
- Specialty in Medical Information

Biogen Idec
- Specialty in Market Access

Eli Lilly Canada Inc.
- Specialty in Pricing Reimbursement and Patient Access
- Specialty in Medical Information
- Specialty in Oncology Marketing

Glaxo SmithKline Inc.
- Specialty in Medical Information and Drug Safety

Hoffmann-LaRoche Ltd.
- Specialty in Medical Affairs
- Specialty in Product Development Regulatory

Sanofi Pasteur
- Specialty in Medical Affairs
- Specialty in Immunization Policy
- Specialty in Compliance
- Specialty in Marketing

*Please note: Apotex will not be participating for the 2018-2019 term.

The participating companies reserve the right to change or delete their offering of a residency program at any time. Applicants should check the up-to-date website, particularly Appendix I “Company Supervisors’ Addresses and Areas of Activity in Participating Companies” for any recent changes.

Last updated 2017-Sep-25
I. DEFINITION AND PARTICIPATING COMPANIES

The Industrial Pharmacy Residency Program is a one year program, administered by the Leslie Dan Faculty of Pharmacy, University of Toronto in cooperation with Participating Pharmaceutical Companies: Allergan Inc., Amgen Canada, Apotex Inc., Astellas Pharma Canada Inc., Biogen Idec Canada Inc., Eli Lilly Canada Inc., GlaxoSmithKline Inc., Hoffmann-LaRoche Ltd., and Sanofi Pasteur.

II. ELIGIBILITY

1. Requirements: An applicant for the position of Industrial Pharmacy Resident must be a graduate pharmacist or a student in the final year of an undergraduate program leading to a recognized university degree in Pharmacy. *In the latter category, a successful applicant must complete all Pharmacy degree requirements before starting the residency.*

2. Requirements: Applicants for the specialty program will be required to have had some Pharmacy experience such as Industrial Pharmacy, Community Pharmacy, Hospital Pharmacy or Research.

3. Applicants from an approved university with a recognized university degree in Pharmacy must have graduated within five years of the last date for application.

4. Preferences: A license to practice Pharmacy is not mandatory, but recommended. Previous industrial experience is not required, but helpful. Applicants who have been employed more than three years in Industrial Pharmacy will ordinarily not be eligible for the program.
Canadian citizens and permanent residents will be given priority.

Note: this is an educational residency program, it is not an application for a position with a pharmaceutical company.

III. APPLICATION PROCEDURE

1. Applicant should review information provided by the companies, paying particular attention to the abilities and characteristics required. This information may be found at 
   http://www.pharmacy.utoronto.ca/residency-programs/industrial-pharmacy

2. Applicant must complete this Application Form (for the Term 2018-2019) Appendix VI.

3. Applicant must send directly (items a, b, and e), and arrange to be sent (items c and d), via email to pharm.residency@utoronto.ca:
   a) this completed Application Form
   b) reasons for wanting to enroll in the Residency Program (question 13 on Application)
   c) three letters of reference
   d) an original pharmacy transcript, sent from the University
   e) a separate list of the companies to which he or she is applying (question 16 on Application)

   The Faculty Coordinator of the Industrial Pharmacy Residency Program will assess each application package for completeness; if satisfactory, the Faculty will then send copies of the Application package, including reasons for wanting to enroll in the Residency Program, the three letters of reference and the pharmacy transcript, to those companies the applicant has selected.

4. Steps 2 and 3 above must be completed between September 1 and October 2, 2017 for residencies beginning September 2018. All complete applications will be forwarded to the companies during the first two weeks of October 2017.

5. The applicant may send only a letter, in the first week of October, directly to the supervisors of the companies to which the applicant has applied (consistent with 3e above). This letter is optional but if sent, should include the rationale for seeking a residency at that particular company.

6. Suitable applicants will be contacted by the Company Supervisor to arrange for an interview during October - November 2017.

7. The Company Supervisor will contact the applicants and the Faculty Coordinator regarding the acceptance or rejection of specific applicants by November 30 2017.

8. If an applicant has not been contacted by a company by December 1, 2017, then the
applicant should assume that his or her application was unsuccessful.

9. The successful applicant will sign a statement, provided by the Company Supervisor, that she or he has accepted a residency at the company and a statement that the resident’s name can or cannot be published in the Terms of Reference and other relevant information.

10. The Company Supervisor will send the Faculty Coordinator a copy of the signed statements.

IV. STARTING DATES

Normally the Resident will begin the program no earlier than **September 1** and no later than **October 1, 2018**.

The normal starting date for applicants who have completed all academic requirements is September following their acceptance by the participating company. An alternate starting date may be selected if agreeable by both the resident and the supervisor of the participating company, provided that the applicant has completed all academic requirements including examinations, clinical and other rotations, and projects.

V. OBJECTIVES

Upon completion of the Industrial Pharmacy Residency Program the resident will be able to:

- Apply a systematic approach to the investigation, analysis and response to an identified issue in Industrial Pharmacy
- Prepare and deliver audience-appropriate oral and written reports

Upon completion of the General Industrial Pharmacy Residency Program the resident will be able to:

- Demonstrate a thorough understanding of several facets of Industrial Pharmacy
- Describe the interrelationships among the various divisions within a pharmaceutical company
- Demonstrate in-depth understanding of at least one functional area within a pharmaceutical company

Upon completion of the Specialty Industrial Pharmacy Residency Program the resident will be able to:

- Demonstrate sufficient competence (knowledge and skills) in a (or two) specialized area(s) of Industrial Pharmacy
- Demonstrate a general understanding of many areas of Industrial Pharmacy
VI. PROGRAM

1. The intention of the general residency is to educate the resident about different areas of Industrial Pharmacy and to provide an opportunity to gain industrial experience. The specialty residency enables the resident to focus their activities on one or two particular areas of interest.

2. The general residency is composed of core rotations through many of the company's departments, thereby ensuring a broad exposure to all facets of Industrial Pharmacy. In addition, the resident will have the opportunity to carry out a major project which will develop the resident's research and investigative skills and the preparation and writing of reports. Finally, the resident will be able to develop their special areas of interest in conjunction with those of the Company in the elective portion of the program.

3. The program must have an encompassing base which will give the resident the requisite exposure to ensure that the year of special study has a definite and positive value. This value comes in part from the educational background and insight of the pharmacy resident and the overview which the resident receives in the areas of research, manufacturing, testing, regulatory affairs, marketing, sale of pharmaceuticals, medical information, post marketing surveillance, managed care, drug safety and pharmacoeconomics. A resident must understand how all these company activities interrelate and the impact they have on the various health professions. Furthermore, the program consists of practical experience and must be knowledge-based and problem-solving in dimension. The resident should finish the program with an appreciation of the relative merits of empirical and theoretical approaches to solving problems. Finally, the resident should complete the program with a tangible gain in skills and knowledge demonstrated by an ability to perform identifiable tasks.
VII. INFORMATION FOR THE GENERAL RESIDENCY

In order to provide flexibility while ensuring an encompassing base for the program, a six month core consisting of at least six core rotations and a major project, plus six months of elective activities are required to be provided by the participating companies to form the twelve month program.

Currently, this general residency is not offered by participating companies.

1. OUTLINE OF PROGRAM

<th>Total program</th>
</tr>
</thead>
</table>
2. Some definitions of the above terms are provided in Appendix IV.

3. The Company Supervisor will provide the resident with a list of the Goals and Objectives for each core rotation and each elective activity. The department head or delegate in each of the above rotations will be requested by the Company Supervisor to provide a brief report on the involvement of the Resident in the department.

4. The Resident will submit reports in each rotation to the Company Supervisor and a final summary report along with the project report to the Core Committee. The Resident will be invited to attend the meetings of the Core Committee to evaluate and discuss his/her experience, and should be encouraged to make a presentation on his/her project. The department head or delegate of each rotation are encouraged to complete a form in order to provide feedback to the resident.

5. The purpose of the elective activities is designed to meet the special interests of the resident and can involve additional time in any one of the core rotations, or other areas of expertise offered by the Company. The companies which do not have Product Formulation, Production and Quality Control (in house), are encouraged to liaise with other participating companies in order that the resident have some exposure to these activities. Other items to be listed under elective activities may include Professional Affairs and Pharmaceutical Association work.

6. List of general residencies:
   - The General Residency will not be offered for the term 2018-2019

7. A check list of requirements for the residents in order that the program may be successfully completed on time is:

   General Program

   a. At least six core rotations each of at least two weeks duration
   b. Major project
   c. Elective activities
   d. Two meetings of the Core Committee
VIII. INFORMATION FOR THE SPECIALTY RESIDENCY

The Specialty residency is 12 months in duration and provides a slightly different stipend support. In contrast, however, this program empowers the specialty resident to focus activities in one or two particular departments. This focus provides the unique opportunity to develop specialty skills in a chosen area of interest. These skills are highly marketable in the pharmaceutical industry.

Possible areas of opportunity the candidate may choose are provided below along with the associated company.

List of Specialty Residencies

**Allergan Inc.**
- Specialty in Market Access

**Amgen Canada**
- Specialty in Medical Information, Medical Communication/Education and Value, Access and Policy (VA&P)

**Apopex Inc.***
- Specialty in Medical Affairs and Pharmacokinetics

**Astellas Pharma Canada Inc.**
- Specialty in Medical Information

**Biogen Idec**
- Specialty in Market Access

**Eli Lilly Canada Inc.**
- Specialty in Pricing Reimbursement and Patient Access
- Specialty in Medical Information
- Specialty in Oncology Marketing

**Glaxo SmithKline Inc.**
- Specialty in Medical Information and Drug Safety

**Hoffmann-LaRoche Ltd.**
- Specialty in Medical Affairs
- Specialty in Product Development Regulatory

**Sanofi Pasteur**
- Specialty in Medical Affairs
- Specialty in Immunization Policy
- Specialty in Compliance
- Specialty in Marketing

* Please note: Apotex will not be participating for the 2018-2019 term

The specialty resident participates in the daily activities of the area chosen in order to gain an understanding of the operations of that department as well as to achieve the necessary competencies in that position. Residents will choose projects offered by the supervisor, including a major project. Opportunities to attend seminars and conferences relating to both Pharmacy and the area of specialty are pursued.

A check list of requirements for the residents in order that the program may be successfully completed on time is:

Specialty Program

a. Full daily active educational participation in the selected area of the residency e.g. Market Access, Medical Information, etc.
b. Major Project
c. Two meetings of the Core Committee
IX. INFORMATION FOR BOTH GENERAL AND SPECIALTY RESIDENCIES

1. The Company Supervisor may send the resident to at least one conference a year paid for by the company.

2. The major project can be conducted within the Company or with a combination of the Company and the Faculty. The topic of the major project should be decided upon by January. A proposal for the major project must be written for presentation to the Core Committee. While the general supervision of the major project will be the responsibility of the Core Committee, individuals with required expertise from within the Company, the Faculty or both may assist or direct the Resident's project. The scope of the major project will only be limited by the expertise and resources available.

The major project should be written so that it can be presented at least to the Core Committee and, perhaps, to appropriate departments within the Company. The report should be reviewed by the Company Supervisor before presentation. If the report is confidential in nature, the Faculty liaison should sign a secrecy agreement before presentation of the report. A suitable guide for preparing the report is provided in Appendix II. Additional supervision should be provided by the Faculty liaison.

Supervisors may wish to encourage their residents to take advantage of the following possible opportunities.

- A visit to the operations of the company in a foreign country, usually the USA
- Consider a rotation of 2-3 days at the Ontario Pharmacists Association's Drug Information and Research Centre, Contact phone 416-385-3472. For one month rotation an honorarium is required.
- Consider a one month rotation at Canadian Agency for Drugs and Technologies in Health (CADTH). Preference would be for a resident who would have completed a drug information rotation prior to coming to CADTH. Contact Marilyn Robertson at 613-226-2553 ext. 1250, email marilynr@cadth.ca

The Company Supervisor and or the Faculty Liaison should inform the Coordinator of the successful completion of the program so that the certificate can be issued. The certificate attesting to a successful completion of the program, will be presented to the resident by the Core Committee and signed by appropriate representatives of the Company, usually the President and Supervisor and the Faculty, the Dean and Liaison. **In order to receive the certificate, the resident must complete all the work of the program and the major project within one year of commencing the program.**

The duration of the residency program is 12 months and the rotations and work of the major project must be completed within this time. Under extenuating circumstances the last one-month can be completed on a part time basis, over two months with prior approval of the program committee. The major project and core rotations must have been already completed before the request is sought. This applies to both general and specialty programs.
3. If the resident is not able to meet the requirement of completing all work of the program and the major project within one year of commencing the program, it will be necessary for the resident to make an appeal in writing. The appeal must be made during the last part of the one year residency to the Appeals Committee through the Coordinator and provide reasons for seeking an extension. The Appeals Committee will consist of the Coordinator or designee, one Faculty Liaison and one Supervisor (these shall be different than the supervisor and liaison for the resident). The Appeals Committee can accept the appeal and state the date when the residency program must be completed or reject the appeal. If the appeal is rejected, the appeal can be submitted by the resident to the Program Committee which usually meets during April for a final decision.

4. Upon successful completion of the Industrial Pharmacy Residency Program the resident will receive a post baccalaureate certificate from the Leslie Dan Faculty of Pharmacy and the participating company.

X. ADMINISTRATIVE INFORMATION FOR BOTH RESIDENCIES

1. During the first week of the resident's program, the resident should be introduced by the supervisor to the people who are responsible for the program in each of the core areas. It is highly recommended that small projects be planned for the resident in each of the core areas. This will enable the resident to achieve a greater depth of understanding, appreciation and interest in the various areas. In addition, it will assure that the resident can learn something more worthwhile in each of the core rotations. It needs to be stressed that this must be a learning experience for the resident. The resident should not be filling a staff position or used to do relief work.

2. In addition to the general objectives described in Sec. V, it is highly recommended that at the beginning of the residency, a set of learning objectives be established for the resident together with the supervisors in order to add more structure to the residency and serve as the basis for providing evaluation and feedback regarding the resident’s performance. Sample templates for setting the learning objectives and evaluation of resident’s performance can be found in Appendix III.

3. The resident's registration fee ($50) for the University will be paid by the Company or a combination of the Company and the resident. This allows the resident to use the University of Toronto Library.

4. The Company should endeavor to provide the resident with a permanent work station in order to give the resident a space in which to prepare reports and to facilitate communication.

5. The Company Supervisor should increase the awareness of the resident within the Company by such means as the Company newsletter, the bulletin board, or other suitable means. It would also be beneficial if the current resident could meet with the new resident so that a better understanding of the program can be provided.

6. The Core Committee oversees the residency at a particular company, and is composed of:

   Company Supervisor - at the participating company
   Faculty member - Liaison
It is essential that the Core Committee meet at least twice during the residency in order to help in the direction of the program and the project. The first meeting should take place within the first month of the resident's program and other meetings should be tentatively set at the first meeting. It is the responsibility of the Company Supervisor to ensure that the first meeting will be held early in the program so that the resident has an early contact with the Liaison.

7. The primary role of the Faculty Liaison is to serve as an advocate for the resident, and to assure that the goals of the residency are being met. In this role, the Faculty Liaison must meet early in the residency with the resident and Company Supervisor to establish a program for the resident. This program should be consistent with the purpose and structure of the residency program.

8. The Faculty Liaison should be involved in the design and evaluation of the major project. Should the project be in an area different from the expertise of the Faculty Liaison, it is the responsibility of the Faculty Liaison to identify a member of the Faculty to become involved with the project design and evaluation.

9. At one meeting, the resident shall outline the major project and describe the intended research strategy. At this meeting, the Core Committee shall formally accept or reject the proposal. In addition, the progress of the resident is to be assessed. At the final meeting, the resident shall review for the major project the research describing the methodology, findings, solution/recommendations, and suggestions for possible future research related to the project findings. Although the written report may not yet be completed at this stage, the Core Committee shall formally accept or reject the major project as partial fulfillment of the requirements for the residency program, contingent upon receipt of the acceptable final project report. If the final meeting is positive and all other requirements have been met, the recommendation for awarding the certificate can be made.

10. Overall direction and guidance for the program will be provided by the Program Committee, composed of the following persons:
   - Dean of the Leslie Dan Faculty of Pharmacy, University of Toronto or his designate
   - Industrial Pharmacy Residency Coordinator
   - Faculty Liaison Members
   - Representatives from the Companies - Full time Company Supervisor for each program
   - OPRA Representative
   with whom the ultimate responsibility for all aspects of the program rests. The Program Committee will meet annually in March to guide the Residency Program.

11. Should issues or problems arise during the residency, the resident should in the first instance attempt to resolve these with the Company Supervisor. If this fails, however, the resident should then seek the advice and direction of the Faculty Liaison to resolve the problem. Should the problem not be resolved in this manner, the resident should then contact the Dean of the Faculty of Pharmacy and the Industrial Pharmacy Residency Program Coordinator.
XI. ADDITIONAL INFORMATION FOR BOTH RESIDENCIES

1. Each company will provide a description of their Industrial Pharmacy Residency Program and the abilities and characteristics of the resident expected by the supervisor. This information will be no more than two pages long, and is to be submitted to the Faculty by September 1, so that this information is available by clicking the name of the company on the first page.

2. Applicants are encouraged to apply to those companies which have interests similar to their own and to which they would like their applications sent, see appendix VI.

3. Information on housing in Toronto can be obtained by contacting:

   Student Housing Service, Koffler Student Services Centre
   University of Toronto
   214 Collège Street
   Toronto, Ontario
   M5T 2Z9
   Tel. 416-978-8045
   E-mail: housing.services@utoronto.ca

4. Prospective residents are encouraged to talk to current residents about the program.

The following are the residents for 2016-2017 and their company affiliations:

Taban Saifi  
Astellas Pharmac Canada Inc.  
675 Cochrane Dr. Suite 500, West Tower Markham ON L3R 0B8

Chia Hui Chung  
GlaxoSmithKline  
7333 Mississauga Road  
Mississauga, ON L5N 6L4

Dunja Bicanin

Sanofi Pasteur  
1755 Steeles Avenue West  
Toronto, ON M2R 3T4

Patricia Lu  
Sanofi Pasteur  
1755 Steeles Avenue West  
Toronto, ON M2R 3T4
XII. FINANCIAL SUPPORT

The resident will be an employee of the Company, on a special project basis. The same stipend will apply to each and every program. It will be established yearly and it is $47,200.00 for the general residency and $49,500.00 for the specialty residency during 2017-2018. For 2018-2019 the stipend for the general residency will be $48,000 and for the specialty residency will be $50,500. It should be noted that while the stipend is uniform at all participating companies the benefits are definitely not uniform. The applicant should seek information regarding benefits from those companies to which the applicant is applying. The benefits may include for example: vacation time, health benefits and attendance at conferences.

APPENDIX II

PROGRAM GUIDELINES FOR THE MAJOR PROJECT

1. Philosophy:

To conform with the Industrial Pharmacy Residency Program Committee Requirements, a major project must be undertaken and successfully completed as partial fulfillment of the residency program. This requirement is to assist the resident in gaining practical problem solving experience. It is anticipated that the resident will obtain a rudimentary understanding of conventional research in which an identified problem or question generates a systematic investigation to arrive at a solution. The project need not be an original idea or issue. However, it should not solely be a literature search. Rather, it must follow the general steps of a) problem identification; b) determining the information currently available; c) setting out alternative methods to solve the problem; d) selecting an experimental method; e) collecting the data; f) summarizing and critically analyzing the findings; g) stating the solution and/or developing recommendations; and h) suggesting further research work.

2. Expectations:
   a. Of the Pharmaceutical Company

   While the project may represent a collaborative venture between various professionals, the company must identify a supervisor who shall take full responsibility for the resident's work.

   Within two months from the starting date of a resident's program, the supervisor shall provide that resident with a reasonable list of potential projects, (normally six or more) from which a selection shall be made not later than January. Alternatively, the problem may be identified and selected by the resident with the approval of the Core Committee.

   b. Of the Resident

   i) The nature of the project

   Although many widely differing projects could meet the requirements, several principles shall be applied. First, the project shall be acceptable to the Core Committee. Second, while it may serve the needs of the company, the project shall be worthwhile to the degree that it permits the student to gain practical experience in research. Finally, it is important that the research is feasible and can realistically be completed, particularly in the time frame allotted to the project.

   ii) Selecting a project
The Company Supervisor, as previously stated, shall furnish the resident with a list of projects from which the resident can make a choice. The resident may also have independent views on a particular project. The overriding principle should be that the resident and Company Supervisor agree on a worthwhile project that would permit the research to be carried forward. It is preferable that the results of the major project be published if possible.

iii) The time allotted for the project

In order for the resident to learn about research methodology, three (3) months shall ordinarily be devoted to the project. In the interests of progress, it may be advisable to provide this time in smaller segments rather than as a single block. This might facilitate, for example, the literature review and writing of a protocol.

iv) Reporting on the project

The project shall be presented to the Core Committee as stated previously. A final written report shall also be compiled, organized like a publication, containing for example:

- a title page
- introduction
- methodology
- results
- discussion including recommendations and relationship to literature reports
- suggestions for further research
- conclusion
- references

In addition, the resident may decide to include the following

- acknowledgments
- a one-page abstract (up to 250 words)
- suggestions for further research
- tables
- legends for figures
- figures
- appendices, where needed.
APPENDIX III

SAMPLE TEMPLATES
For Learning Objective Setting & Evaluations of Industrial Pharmacy Residents

The attached Templates were kindly provided by Lisa Li, Pharmacy Resident in Drug Information at Astellas Pharma for 2013-2014, who designed these forms for Medical Information Specialty during her residency as Astellas. Interested companies and residents should be able to adopt these forms either as is or in modified form to suit individual needs. Lisa Li has also provided the following synopsis regarding these template forms:

There are 4 forms attached – Learning Objectives, Presentation Evaluation, Medical Information Residency Evaluation and Major Project Residency Evaluation.

Setting the Learning Objectives for the residency is to further enhance the learning of the residency, beyond those objectives set for the specialty residency itself. Examples can include exposure to different departments within the company, participating in a company sponsored conference, etc. This is to be set at the beginning of the residency, and with the guidance of the Director so there is ample opportunity for these types of activities throughout the year.

The Presentation Evaluation is a multi-purpose form that allows the resident to gain formal feedback after delivering any presentation.

The Medical Information Residency Evaluation is to evaluate the knowledge and competencies of the resident within the specialty residency itself (in our case, the specialty is in Medical Information) and also assessing professional behaviors. We thought it would be best to assess this at midpoint and end of residency (to assess progress over the year), with an opportunity for a self-evaluation and supervisor evaluation.

The Major Project Evaluation is to evaluate different aspects of project management with the major project. This includes team work, project planning, communication skills, attitudes and behaviors. We also thought it would be best to assess this at midpoint and end of residency, with an opportunity for a self-evaluation and supervisor evaluation.
Personal Learning Objectives

Resident Name:
Supervisor Name:
Director Name:

The following objectives for this rotation are the result of negotiation between the resident, the supervisor and the Director of Medical Affairs, and include:

- objectives that educate the resident about different teams within Medical Affairs
- objectives that expose the resident to different areas of the company’s departments

Do not include Medical Information Residency Program Objectives listed on the Residency Program Guide.

The learning objectives should be reviewed at the midpoint and final assessment.

## Overall Comments:
APPENDIX IV

DEFINITIONS

Medical/Scientific Affairs

Bioavailability: measurements of the rate and extent of drug absorption.

Clinical Research: the design and monitoring of scientifically valid and ethical studies in humans for investigational drugs, new drugs and new indications for marketed drugs.

Medical/Drug Information: responds to all medical inquiries from sales representatives, health-care professionals, consumers and departments within the company. Reviews medical literature. Ensures compliance of all medical marketing materials.

Regulatory Affairs: gathering, interpreting, summarizing and formatting information to submit to the government for approval for the sale of a drug. Ensuring that all departments of the company operate according to the Food and Drugs Act and regulatory guidelines.

Statistical Analysis: statistical analysis of data from clinical research and other studies.

Product Development and Formulation: the processes involved in the creation of dosage forms and their development for commercial use.

Marketing

Market Research: collecting information on prescribing habits and prescriptions to assist in designing better marketing strategies.

Product Management: strategic business responsibilities for product(s) from manufacturing through to pricing and advertising with the ultimate goal of making a profit.
Promotion and Advertising:

a product is promoted and advertised to the health science community (e.g. through sales representatives and professional journal advertising).

Sales

Consumer Sales:

promoting non-prescription products through displays and other incentives.

Pharmaceutical Sales:

sales representatives call on doctors and pharmacists to familiarize and/or introduce them to the company's products.

Sales Training:

the program(s) necessary to prepare a sales representative to call on doctors and pharmacists in various specialties for the promotion of the company's products and services.

Production

Manufacturing:

the combination and manipulation of raw materials in large quantities to produce the final dosage form.

Packaging:

the assembly of the drug into its container and labeling for shipment.

Quality Control/Quality Assurance

Quality Assurance:

monitoring to ensure that standard operating procedures are being carried out according to internal procedures and government regulations.

Quality Control:

testing, from the receipt of raw materials to the shipping of the final product, to ensure that standard specifications are met.

Managed Care:

the administration of health care resources for the efficient and effective treatment of disease and the promotion of health to enhance the quality of life.

Pharmacoeconomics:

the description and analysis of the costs (i.e. resources consumed) and consequences of pharmaceutical products and services.
APPENDIX V

Dear Prospective Resident,

Since your application will be your communication with the companies of interest to you, it is essential that it be completed in an intelligent, knowledgeable, neat and clear manner. This application is usually responsible for forming a first impression with the company's supervisor and consequently, is important in the selection of candidates for the residency. The residency often assists the residents in the selection of their future careers.

You should find out about the companies of your choice as suggested in Section III (APPLICATION PROCEDURE), (1) and Section XI (ADDITIONAL INFORMATION), (1). The names of supervisors and areas of activity of participating companies are provided in Appendix I. In addition, annual reports or similar information are provided in the libraries of most Schools or Faculties of Pharmacy. You should have a considerable knowledge about the company so that you may make a suitable selection and are able to answer questions about the company during the interview.

APPENDIX VI

The Award

The Program Committee of the Industrial Pharmacy residency Program consisting of the Leslie Dan Faculty of Pharmacy in cooperation with the participating companies has sponsored an Award consisting of a plaque and $1000.00 to acknowledge one resident who has completed a major project of high quality and who has demonstrated leadership qualities and undertaken new initiatives during his or her residency. Normally the award is given to one resident, however under certain circumstances the award may be split into two awards of equal value. Residents applying for the award shall provide three printed hard copies of their major project and three printed hard copies of documented evidence indicating leadership qualities and new initiatives during their residency, to the Coordinator, Industrial Pharmacy Residence Program of the Leslie Dan Faculty of Pharmacy by October 31 of the year they complete the residency. Only applicants who have completed all the requirements of the program within one year of beginning, are eligible to apply for the award unless there are extenuating circumstances.

APPENDIX VII

APPLICATION FORM
